Summary

I am a full-stack JavaScript developer living in Ankara, Turkey. I've been developing software for seven years, and I've been blogging to share what I've learned. JavaScript React, Node.js, TypeScript / MongoDB and PostgreSQL / GraphQL. - bm.ksglu@gmail.com

Experience

Full Stack Developer

Countly

Jun 2019 - Present (1 year 5 months +)

Remote - NodeJS, MongoDB, React Native, Flutter, BackboneJS, JQuery, Vue.js

I am working remotely in Countly from Ankara, Turkey. I am responsible for the development of new analytics plugins and the improvement of existing plugins and SDKs. Countly securely processes billions of data-points on the cloud and on-premise every day, so its high-performance architectural studies have taught me a lot.

Full Stack Developer

TDSmaker

Jul 2018 - Jun 2019 (1 year)

Remote - React JS, TypeScript, Redux, Node JS, MongoDB, TDD, Docker, AWS

I am worked remotely in TDSmaker from Ankara, Turkey. TDSmaker is a unique web-based solution for a technical datasheets management tool of professionals and that is an open-source project on GitHub. It was a great experience for me to build, document, and code a new SaaS from scratch. I have worked with talented and mentoring engineers and great managers. I developed the UI using JavaScript React and TypeScript, and the back-end using Node.js, TypeScript, and MongoDB. I used AWS services and managed the CI/CD processes. Unit Test has always been a priority.

Software Intern

JotForm

Feb 2018 - May 2018 (4 months)

I worked with the Source team in JotForm. I developed simple applications with JavaScript React / Redux and published two packages at Npm.

Skills

JavaScript • TypeScript • React.js • Amazon Web Services (AWS) • Node.js • MongoDB
