Summary

I am a full-stack JavaScript engineer. I've been developing software for seven years and I've been blogging to share what I've learned.

Experience

Full Stack Developer
Countly
Jun 2019 - Present (1 year +)
Fully Remote - NodeJS, MongoDB, React Native, BackboneJS, JQuery, Vue.js

I working on fully-remotely in Countly from Turkey and we use the MongoDB and Node.js techs on the server-side.

I mostly took responsibility for developing new analytics plugins and improving existing plugins. I also worked on new features in the Countly dashboard and some plugins and developed CLI features specific to some plugins.

On the side of the SDK, I developed to React Native and Flutter SDKs with Bridge Method calls.

Countly securely processes billions of data-points on the cloud and on-premise every day, so its high-performance architectural studies have taught me a lot.

Full Stack Developer
TDSmaker
Jul 2018 - Jun 2019 (1 year)
Fully Remote - React JS, TypeScript, Redux, Node JS, MongoDB, TDD, Docker, AWS

I worked on fully-remotely in TDSmaker from Turkey and I developed many components for the front-end and worked on architecture using JavaScript React and TypeScript.

I managed the CI/CD processes, make TDD and wrote documents, used many services of AWS.

On the server-side, I developed the REST API using Node.js and MongoDB.

Software Intern
JotForm
Feb 2018 - May 2018 (4 months)
React JS and Redux

Skills

JavaScript • TypeScript • React.js • Amazon Web Services (AWS) • Node.js
