Summary

I am a full-stack JavaScript engineer. I've been developing software for seven years and I've been blogging to share what I've learned.

Experience

Full Stack Developer
Countly

Jun 2019 - Present (1 year +)

Remote - NodeJS, MongoDB, React Native, Flutter, BackboneJS, JQuery, Vue.js

I am working on fully-remotely in Countly from Turkey, and we use the MongoDB and Node.js techs on the server-side. I mostly took responsibility for developing new analytics plugins and improving existing plugins. I also worked on new features in the Countly dashboard, and some plugins and developed CLI features specific to some plugins. On the side of the SDK, I developed to React Native and Flutter SDKs with Bridge Method calls. Countly securely processes billions of data-points on the cloud and on-premise every day, so its high-performance architectural studies have taught me a lot.

Full Stack Developer
TDSmaker

Jul 2018 - Jun 2019 (1 year)

Remote - React JS, TypeScript, Redux, Node JS, MongoDB, TDD, Docker, AWS

I worked on fully-remotely in TDSmaker from Turkey, and I developed many components for the front-end and worked on architecture using JavaScript React and TypeScript. I managed the CI/CD processes, make TDD and wrote documents, used many services of AWS. On the server-side, I developed the REST API using Node.js and MongoDB.

Software Intern
JotForm

Feb 2018 - May 2018 (4 months)

I worked with the Source team in JotForm. I developed simple applications with JavaScript React / Redux and published two packages at Npm.

Skills

JavaScript • TypeScript • React.js • Amazon Web Services (AWS) • Node.js • MongoDB
